

Introduction

EsemkaCommerce is an ecommerce application that makes buying and selling transactions easier for customers. Customers can see the products being sold along with the available stock. Admin can also manage product data that you want to sell.

Contents

In this test project there are some files and usable resources:

- | | |
|--------------------------|--------------------------------------|
| 1. EsemkaCommerce_TP.pdf | (Test project file) |
| 2. EsemkaCommerce_Demo | (Wireframe demo folder) |
| 3. EsemkaCommerce_Style | (Style folder) |
| 4. EsemkaCommerce_DB.sql | (Microsoft SQL Server database file) |

Project Description & Tasks

When developing the project, ensure all the deliverables meet the general requirements provided by the project designers:

- Project Criteria:
 - The project name should be “DESKTOP_[XX]”, where XX is your PC number.
 - Time management is a crucial factor for the success of this project. So, manage your time wisely and submit all your works on time.
- Application User Interface:
 - Use the style guide provided consistently in the entire project.
 - The application wireframe is already provided by the UI designer.
 - You are allowed to modify the application interfaces as long as it doesn’t interfere the business and application flow.
 - The scoring will be focused on the features of the application.
 - Please provide scrollbar when the content doesn’t fit into the container.
- Validation and Error Messages:
 - The application must runs well with a proper validation and shows a useful error messages to the user.
 - Analyze the required validation(s) that is/are needed in the application. This is one of the scoring criteria for your analytical skills for the project.
 - Any specific validation will be given in the project description.

Instructions for Competitors

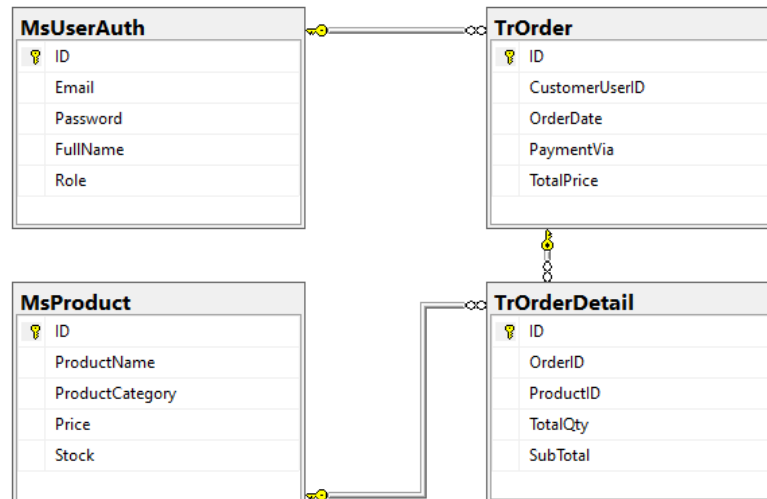

1. Import the Database

Import the database from the “.sql” files that already given to you. This will be the only database that you will be working on. You are **prohibited** to change any schema on the database.

2. Develop the application and submit the project

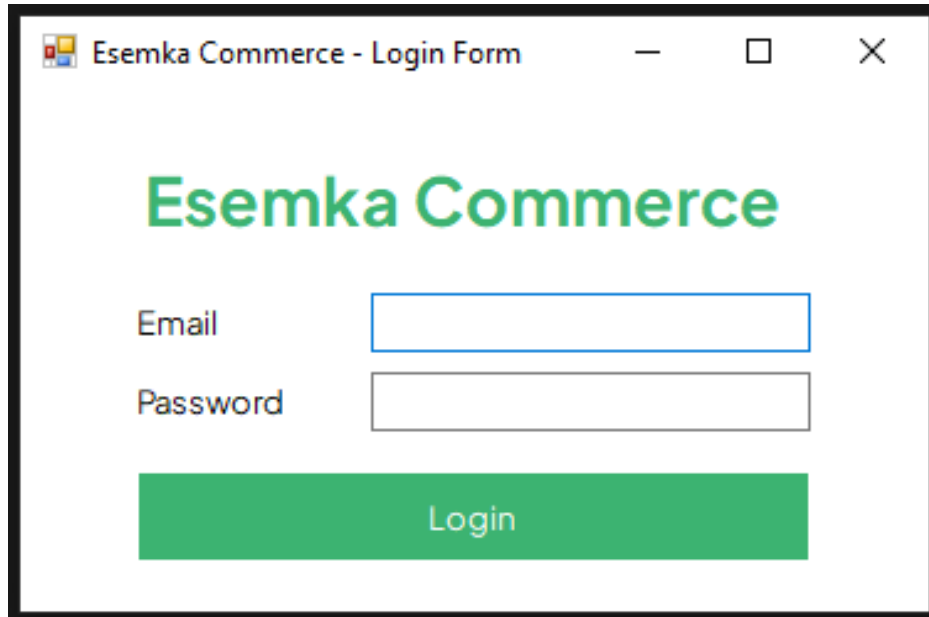

Develop the desktop application based on the description in the next section. And submit all your projects to the jury.

Entity Relationship Diagram

To make it easier for you to understand the database structure, Database Designers from EsemkaCommerce has provided you an Entity-Relationship Diagram (ERD). This diagram will explain the concept and representation of the data model that is used in the database.

1. Login Form

The image shows a screenshot of a web application window titled "Esemka Commerce - Login Form". The window has a standard Windows-style title bar with minimize, maximize, and close buttons. The main content area features the "Esemka Commerce" logo in green text at the top. Below the logo, there are two input fields: one labeled "Email" and another labeled "Password". Both fields are empty and have a light blue border. Below these fields is a large green button with the text "Login" in white. The entire form is set against a white background.

This is the first form that will be used by the user to login to the application.

- Users can **login** to the application by **filling their email** and **password**.
 - If the **combination exists** in the database, check the **Role**. Then if role is **Admin** screen will be directed to **Admin Main Form** but if role is **Customer** screen will be directed to **Customer Main Form**
 - If the **combination doesn't exists** in the database, **let the user know**.
- **Validate** all field with shown message .

2. Admin Main Form
